

MICROSOFT POWER BI

- At minimum, a computer with 2-cores and 4GB RAM running Windows 8 / Windows Server 2008 R2, or later
- **Display:** At least 1440x900 or 1600x900 (16:9) recommended.
- **Internet connectivity:** You must have the ability to connect to the Internet outside your organization
- **Microsoft Power BI Desktop installed:** you should have downloaded and installed Power BI Desktop from the Microsoft Store <https://www.microsoft.com/en-us/p/power-bi-desktop/9ntxr16hnw1t> or from the download center <https://go.microsoft.com/fwlink/?LinkId=521662>.
- Microsoft Power BI Desktop requires Internet Explorer 10 or later.
- **Signup for Power BI:** Go to <http://aka.ms/pbidiadtraining> and sign up for Power BI with a business email address. If you cannot sign up for Power BI, let the instructor know.
- If you have an existing account, please go to <https://powerbi.microsoft.com> and **Sign in** using your **Power BI account**

traffic at the end of 2021

Applications that transform Sales

- High-yield use cases:

Applications that transform Finance

High-yield use cases:

Forecasting

What are the range of outcomes I can expect?
(so I can most efficiently plan and allocate resources)

Fraud

Which transactions are suspicious?
(so I can efficiently monitor and prevent it)

Risk

How risky is this customer or project ?
(so I can prepare for and mitigate adverse events)

Auditing

Current State

We are overwhelmed by the amount of data our organization must manage, process, and analyze.

We do not have the IT capabilities to integrate, store and process the data coming from many sources.

Desired Future State

We can manage and process unlimited amounts of data, providing the insight we need to align our strategy and execution.

We can easily integrate data from different sources cutting across sales, finance, payroll, healthcare charge, supply chain, marketing and operations...

Our focus has shifted from controlling data to being the steward of data and insights.

Auditor

We are also looking to...

- Generate strategic analyses, enterprise risk assessments and business insights
- Develop internal audit plans and suggest quality improvements
- Create predictions and warnings for C levels and stakeholders

Accounting

Prescriptive Analytics: What should I do?

- *What-if scenarios*
- *Recommendations, Optimizations*

- *Machine Learning/ Deep Learning*
- *Rules*
- *Optimization*
- *Simulation*

Predictive Analytics: What will happen?

- *Predictive modelling for customers preferences and desires*
- *Real-time business and customer analytics, predictive models*
- *Sales Forecast, Financial Forecast, Project Appraisals, Trend Analysis, Budget Prediction*

- *Machine Learning/ Deep Learning*
- *Data Modelling*
- *Forecasting*
- *Big Data*

Diagnostic Analytics: Why did it happen?

- *Data Analytics & Data Mining*
- *Deep-dive to detail level of analytics*
- *Anomaly / Fraud Detection*
- *Patterns and Problems in large data sets*

- *Statistics*
- *Data Mining*
- *Machine Learning*
- *Scoring*

Descriptive Analytics: What has happened?

- *Summarizing and interpreting raw data*
- *Sales Performance, Inventory Stock, Cost Per Customer...*
- *General Ledger, Account Payables, Account Receivables, Fixed Assets, Budgetary Control...*
- *MTD, YTD, Growth %, Target Achievement, Run Rate, YTG, % vs Forecast...*

- *OLAP*

Data Analytics Process

What is Analytics ?

Descriptive: What's happening in my business?

- Comprehensive, accurate and live data
- Effective visualisation

Diagnostic: Why is it happening?

- Ability to drill down to the root-cause
- Ability to isolate all confounding information

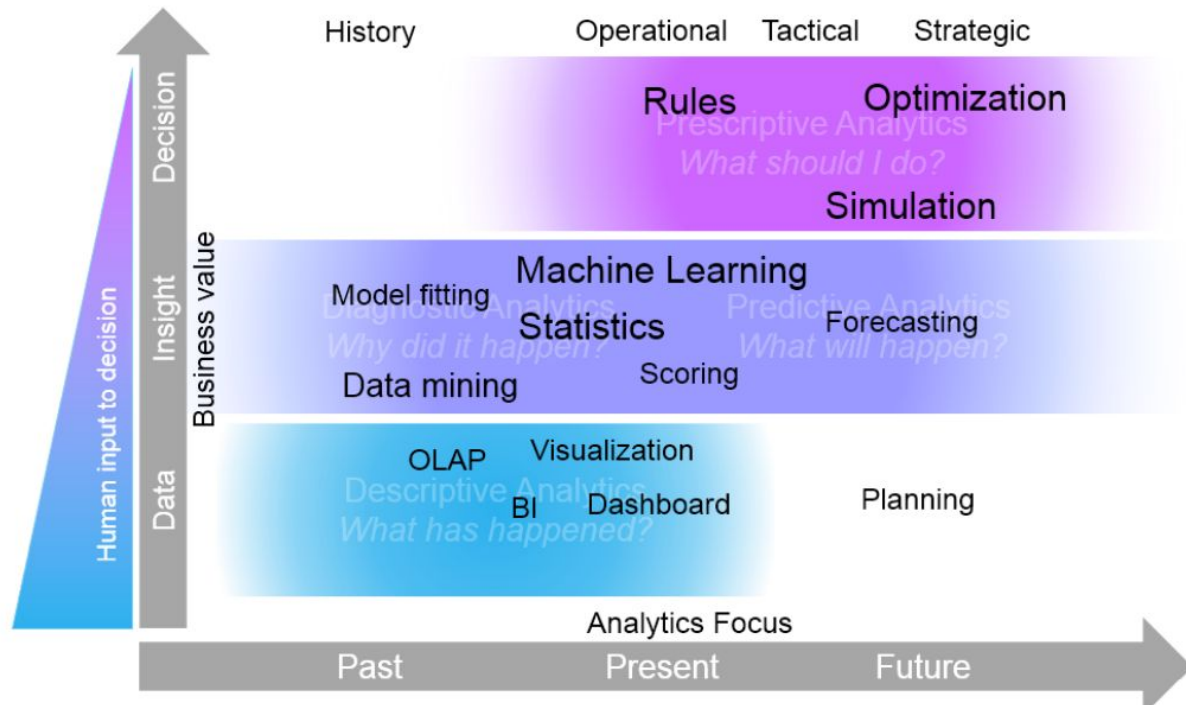

Predictive: What's likely to happen?

- Business strategies have remained fairly consistent over time
- Historical patterns being used to predict specific outcomes using algorithms
- Decisions are automated using algorithms and technology

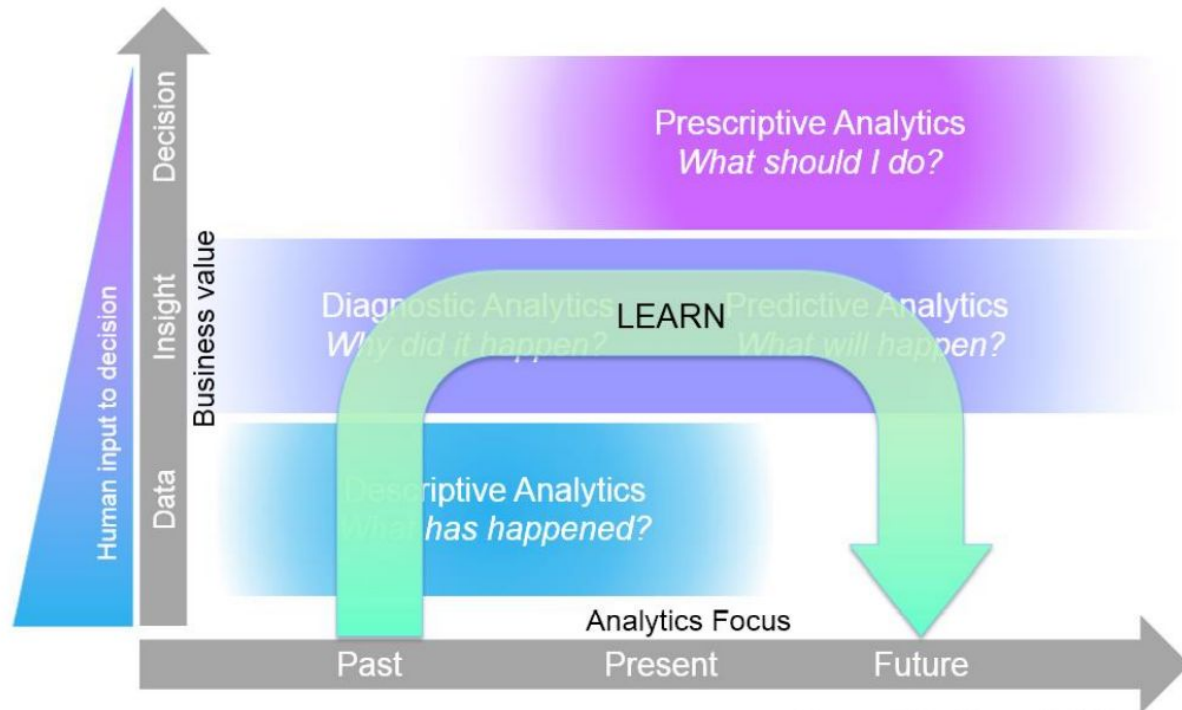

Prescriptive: What do I need to do?

- Recommended actions and strategies based on champion/challenger testing strategy outcomes
- Applying advanced analytical techniques to make specific recommendations

POWER BI

INTRODUCTION

What is Power BI?

Power BI is a collection of software services, apps, and connectors that work together to turn your unrelated sources of data into coherent, visually immersive, and interactive insights. Your data may be an Excel spreadsheet, or a collection of cloud-based and on-premises hybrid data warehouses. Power BI lets you easily connect to your data sources, visualize and discover what's important, and share that with anyone or everyone you want.

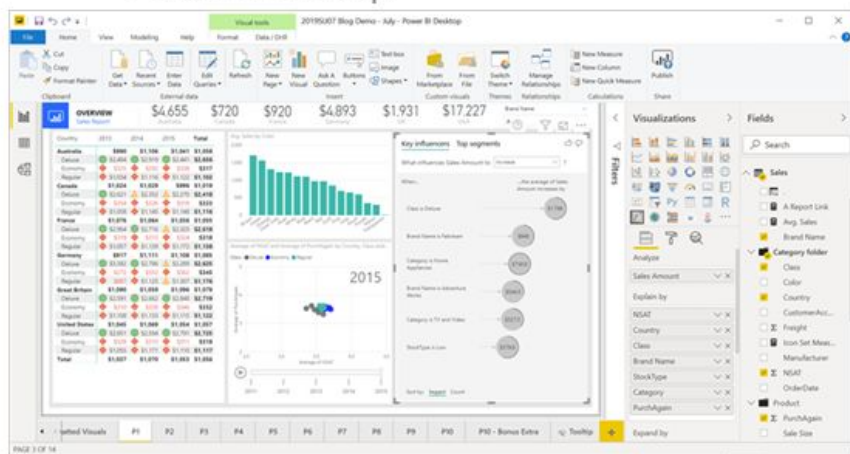

The parts of Power BI

Power BI consists of several elements that all work together, starting with these three basics:

- A Windows desktop application called Power BI Desktop.
- An online SaaS (*Software as a Service*) service called the Power BI service.
- Power BI mobile apps for Windows, iOS, and Android devices.

Power BI Desktop

Power BI service

Power BI Mobile

For example, you might primarily use the Power BI service to view reports and dashboards. Your number-crunching, business-report-creating coworker might make extensive use of Power BI Desktop or Power BI Report Builder to create reports, then publish those reports to the Power BI service, where you view them. Another coworker, in sales, might mainly use the Power BI phone app to monitor progress on sales quotas, and to drill into new sales lead details.

The flow of work in Power BI

One common workflow in Power BI begins by connecting to data sources in Power BI Desktop and building a report. You then publish that report from Power BI Desktop to the Power BI service, and share it so business users in the Power BI service and on mobile devices can view and interact with the report.
